

Fund description

The Fund invests in a mix of shares, bonds, property, commodities and cash. The Fund may buy assets outside the common monetary area (CMA) up to a maximum of 35% of the Fund (with an additional 5% for Africa ex-CMA). The Fund typically invests the bulk of its foreign ex-Africa allowance in a mix of funds managed by Orbis Investment Management Limited, our offshore investment partner. The maximum net equity exposure of the Fund is 40% and we may use exchange-traded derivative contracts on stock market indices to reduce net equity exposure from time to time. The Fund is managed to comply with the investment limits governing retirement funds. Returns are likely to be less volatile than those of an equity-only fund or a balanced fund.

Fund objective and benchmark

The Fund aims to provide a high degree of capital stability and to minimise the risk of loss over any two-year period, while producing long-term returns that are superior to bank deposits. The Fund's benchmark is the daily interest rate, as supplied by Standard Bank Namibia Limited, plus 2%.

How we aim to achieve the Fund's objective

A major portion of the Fund is typically invested in money market instruments. We seek to deploy the Fund's cash by investing in shares when they can be bought at a significant discount to their intrinsic value. We thoroughly research companies to assess their intrinsic value from a long-term perspective. This long-term perspective enables us to buy shares which are shunned by the stock market because of their unexciting or poor short-term prospects, but which are relatively attractively priced if one looks to the long term. If the stock market offers few attractive shares, we may allocate a low weight to shares or partially hedge the Fund's stock market exposure in consideration of the Fund's capital preservation objectives. The Fund may also invest in bonds, property and commodities. The Fund's bond and money market investments are actively managed.

Suitable for those investors who

- Are risk-averse and require a high degree of capital stability
- Seek both above-inflation returns over the long term, and capital preservation over any two-year period
- Require some income but also some capital growth
- Wish to invest in a unit trust that complies with retirement fund investment limits

Minimum investment amounts

| | |
|---------------------------------------|-----------|
| Minimum lump sum per investor account | N\$20 000 |
| Additional lump sum | N\$500 |
| Minimum debit order | N\$500 |

- Maximum percentage decline over any period calculated from monthly returns. The maximum drawdown occurred from 31 January 2020 to 31 March 2020. Drawdown is calculated on the total return of the Fund (i.e. including income).
- The percentage of calendar months in which the Fund produced a positive monthly return since inception.
- The standard deviation of the Fund's monthly return. This is a measure of how much an investment's return varies from its average over time.
- These are the highest or lowest consecutive 12-month returns since inception. This is a measure of how much the Fund and the benchmark returns have varied per rolling 12-month period. The Fund's highest annual return occurred during the 12 months ended 31 October 2021 and the benchmark's occurred during the 12 months ended 31 December 2017. The Fund's lowest annual return occurred during the 12 months ended 31 March 2020 and the benchmark's occurred during the 12 months ended 31 August 2021. All rolling 12-month figures for the Fund and the benchmark are available from our Client Service Centre on request.
- The daily interest rate, as supplied by Standard Bank Namibia Limited, plus 2%. Performance as calculated by Allan Gray as at 31 December 2022.

| Cents per unit | 573.0935 | 851.1341 | 1066.3424 | 977.7829 |

Annual management fee

Allan Gray charges a fee based on the net asset value of the Fund excluding the portion invested in Orbis funds. The fee rate is calculated daily by comparing the Fund's total performance over the last two years, to that of the benchmark. If the Fund's return over two years is equal to or less than 0%, Allan Gray will not charge a fee.

Fee for performance equal to the Fund's benchmark: 1.00% p.a.*

For each percentage of two-year performance above or below the benchmark we add or deduct 0.1%, subject to the following limits:

Maximum fee: 1.50% p.a.*

Minimum fee: 0.50% p.a.*

This means that Allan Gray shares in approximately 20% of annualised performance relative to the benchmark.

A portion of the Fund may be invested in Orbis funds. Orbis charges performance-based fees within these funds that are calculated based on each Orbis fund's performance relative to its own benchmark.

*Management fees charged for the management of unit trust portfolios do not attract VAT.

Total expense ratio (TER) and transaction costs

The annual management fees charged by both Allan Gray and Orbis are included in the TER. The TER is a measure of actual expenses incurred by a fund over a one and three-year period (annualised). Since Fund returns are quoted after deduction of these expenses, the TER should not be deducted from the published returns (refer to page 4 for further information). Transaction costs are disclosed separately.

Top 10 share holdings as at 31 December 2022 (CMA and Foreign) (updated quarterly)

| Total investment charge | 1.74 | 1.16 |

Note: There may be slight discrepancies in the totals due to rounding.

Global markets saw a sharp reversal in 2022 and South African and Namibian markets were not unscathed. It is worth assessing how the Allan Gray Namibia Stable Fund has performed against its objectives during this volatile period.

The Fund aims to:

- Provide a high degree of capital stability
- Minimise the risk of loss over any two-year period
- Produce long-term returns better than bank deposits and inflation

These objectives have been met throughout the past two years and the Fund has delivered an annualised return of 9.9%, comfortably ahead of cash returns of 3.5% and inflation of 5.9%¹. Capital invested in the Fund provided stable returns without major drawdowns, despite the volatility in both equity and bond markets. Over the past 12 months, the Fund delivered a return of 7.6%, outperforming its benchmark.

During 2022, global equities and global bonds declined by 18.1% and 17.2%, respectively, in US dollars, reversing the returns of the preceding year. The recent period of volatility has been a good illustration of the benefits of a diversified asset allocation in achieving the Fund's objectives. It can be tempting to only hold cash during periods of uncertainty, but the returns from this are often unsatisfactory over longer timeframes. Over the past two years, cash returns have lagged inflation by a meaningful margin. The addition of some equities at attractive valuations have enhanced returns of the Fund over this period without adding undue risk.

Inflation can be an underappreciated risk for conservative investors. Equities tend to be a good hedge against inflation, as businesses typically have some ability to pass on higher prices. The Fund also has an allocation to foreign assets, which provides some protection against our local currency. This is a

useful feature in the portfolio, as a weakening of the rand and Namibian dollar often corresponds to falling prices for South African and Namibian bonds. Combining different asset classes can reduce volatility, as declines in one area are partially offset by gains in others.

What do we expect for future returns?

The last five years have not provided a particularly favourable environment for the Fund. Returns from most South African and Namibian asset classes were muted over this period with limited opportunities for returns meaningfully ahead of inflation. Over this period, annualised returns were 8.0% for South African shares, 1.3% for Namibian primarily listed equities, 7.8% for South African bonds, 10% for Namibian bonds and 4.5% for local cash, compared to inflation of 4.4%². Looking forward, the outlook seems much more positive. For example, the current yield on the IJG Namibia Bond Index is 11.1% and Namibian cash rates are at 5.8% – in both cases higher than the trailing returns. Similarly, the valuations for South African and Namibian equities are relatively low compared to history, which would suggest higher returns from this starting point. While there are certainly many challenges facing the South African and local economy and various risks in the market, the available investment opportunities are attractive.

The Fund will strive to take advantage of attractive valuations in various asset classes, without taking on undue risks. The asset allocation remains conservative. Net equity exposure is at 26%, compared to a maximum allowable limit of 40%. The fixed income allocation has a relatively low exposure to interest rate risk, with a modified duration of only 3.2.

Management Company

Allan Gray Namibia Unit Trust Management Company is an approved management company in terms of the Unit Trusts Control Act 54 of 1981 as amended, and is incorporated and registered under the laws of Namibia and supervised by the Namibia Financial Institutions Supervisory Authority (NAMFISA). The trustee and custodian is Standard Bank Namibia.

Performance

Unit trusts are generally medium- to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to future performance. Where annualised performance is mentioned, this refers to the average return per year over the period.

Unit price

Unit trust prices are calculated daily on a net asset value basis, which is the total market value of all assets in the portfolio, including any income accruals and less any permissible deductions from the portfolio, divided by the number of units in issue.

Redemptions

Allan Gray Namibia Unit Trust Management Company will repurchase any number of units offered to it on the basis of prices calculated in accordance with the requirements of the Unit Trusts Control Act 54 of 1981 as amended and on the terms and conditions set forth in the trust deed.

Total expense ratio (TER) and transaction costs

The total expense ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past one- and three-year periods. The TER includes the annual management fees that have been charged (both the fee at benchmark and any performance component charged)

and other expenses like audit and trustee fees. Transaction costs (including brokerage, securities transfer tax, Share Transactions Totally Electronic (STRATE) and investor protection levies where applicable) are shown separately. Transaction costs are necessary costs in administering the Fund and impact Fund returns. They should not be considered in isolation as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager, and the TER. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns. As unit trust expenses vary, the current TER cannot be used as an indication of future TERs. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. Instead, when investing, the investment objective of the Fund should be aligned with the investor's objective and compared against the performance of the Fund. The TER and other funds' TERs should then be used to evaluate whether the Fund performance offers value for money. The sum of the TER and transaction costs is shown as the total investment charge (TIC).
